

Q5 - Simple Bank Balance Program Guide

Python Solution (bank.py)

```
def deposit(balance, amount):
    return balance + amount

def withdraw(balance, amount):
    if amount > balance:
        return "Insufficient funds"
    return balance - amount

def add_interest(balance, rate):
    return balance + (balance * rate / 100)

if __name__ == "__main__":
    balance = 1000
    print(deposit(balance, 500))
```

Expected Output

```
1500
```

Git Commands

```
git add .
git commit -m "Added Q5 Bank Balance Program"

git checkout -b feature-withdraw
# Add withdraw()
git add .
git commit -m "Added withdraw function"

git checkout main

git checkout -b feature-interest
# Add add_interest()
git add .
git commit -m "Added interest function"

git checkout main

git merge feature-withdraw
git merge feature-interest

# If a merge conflict occurs:
# Edit bank.py and keep both functions.
git add .
git commit -m "Resolved merge conflict"

git push origin main
```
