

Q2 - Temperature Converter Program Guide

Python Solution (temperature.py)

```
def celsius_to_fahrenheit(c):  
    return (c * 9 / 5) + 32  
  
def fahrenheit_to_celsius(f):  
    return (f - 32) * 5 / 9  
  
def celsius_to_kelvin(c):  
    return c + 273.15  
  
if __name__ == "__main__":  
    print(celsius_to_fahrenheit(25))
```

Expected Output

```
77.0
```

Git Commands

```
# Run after Q1 is complete in the same lab0 repository  
  
mkdir Q2  
  
# Save temperature.py inside Q2  
cd Q2  
python temperature.py  
cd ..  
  
git status  
git add .  
git status  
git commit -m "Added Q2 Temperature Converter Program"  
  
git checkout -b feature-fahrenheit-to-celsius  
# Add fahrenheit_to_celsius()  
git add .  
git commit -m "Added fahrenheit_to_celsius function"  
  
git checkout main  
  
git checkout -b feature-kelvin  
# Add celsius_to_kelvin()  
git add .  
git commit -m "Added celsius_to_kelvin function"  
  
git checkout main  
  
git branch -v  
  
git merge feature-fahrenheit-to-celsius  
git merge feature-kelvin  
  
# Resolve conflicts if Git asks, then:  
git add .  
git commit -m "Resolved merge conflict"  
  
git push origin main
```
